Commercial Insurance Workflow

1. Administrative Setup Phase

Before customers use the system, administrative configuration is required.

Admin logs into the system.

Admin performs initial setup:

- Creates Insurance Types (e.g Liability, Workers Compensation).
- Creates Plans under each Insurance Type.
- Creates Agent accounts.
- Creates Claims Officer accounts.

Agents and Claims Officers cannot self-register they must be created by Admin.

Admin ensures users are active and available for assignment

2. Insurance Browsing Phase

The user enters the system through the landing page.

The system displays available commercial insurance categories (Insurance Types).

The user selects a specific insurance type such as:

- General Liability
- Workers Compensation
- Commercial Auto
- Cyber Insurance.

Based on the selected insurance type, the system retrieves and displays all available plans.

Each plan initially shows:

- Coverage details
- Benefits
- Base plan premium (initial price only).

3. Quote Generation Phase

The user chooses to generate a quote for a selected plan.

The system checks whether the user is authenticated.

- If not authenticated, the user is redirected to register or login.

After authentication, the system verifies if a business profile exists.

- If no business profile exists, the user must create one.

Business profile information includes:

- Business name
- Industry type
- Employee count
- Annual revenue
- Location.

The user selects the business profile to be insured.

4. Agent Assignment

Once the business profile is selected, the system automatically assigns an available agent.

Agent assignment is handled internally using automated logic such as:

- Round-robin distribution
- Availability checks.

This removes manual admin intervention and ensures real-time processing.

5. Dynamic Premium Calculation

After agent assignment, the system calculates the final premium dynamically.

The premium calculation includes:

- Base plan premium
- Business risk factors
- Industry classification
- Employee count or annual revenue
- Agent commission.

The system displays the final premium to the user.

6. Policy Creation Phase

The user decides whether to accept the generated quote.

If accepted:

- The system creates a policy record.
- Policy status is set to **Pending**.

If rejected:

- The user is redirected back to plan selection.

7. Payment Processing Phase

The user proceeds to payment.

The system processes payment through the payment module.

If payment is successful:

- Policy status changes to **Active**.

If payment fails:

- Policy remains pending.
- User can retry payment later.

8. Active Policy Management

Once active, the customer can:

- View policy details
- Track policy status
- Manage claims.

The assigned agent can view and monitor the policy from their dashboard.

9. Claim Submission Process

The customer initiates a claim request.

The system verifies that:

- Policy is active and eligible.

The customer enters claim details.

The customer uploads required claim documents as proof.

Claim status becomes **Submitted**.

10. Claims Officer Assignment

The system automatically assigns a claims officer.

The claims officer reviews:

- Claim details
- Uploaded documents.

The claims officer decides:

- Approve claim
- Reject claim.

11. Claim Resolution

If approved:

- Claim settlement process begins.
- Claim status becomes **Settled**.

If rejected:

- Claim status becomes **Rejected**.
